

## Doctoral Training Programme

**Applied Social Sciences** 

## Study for a PhD Applied Social Sciences

The Applied Social Sciences Doctoral Training Programme at De Montfort University (DMU) aims to create an excellent research experience for postgraduate research students in the elds of:

- Health, healthcare and health policy
- Crime and justice
- Ethnicity and diversity
- Social work and social justice, including youth studies and caring

The Applied Social Sciences Doctoral Training Programme (DTP) exploits a track record of nationally and internationally recognised research, including collaboration with local and international partners. You will be guided throughout your PhD by a small team of experienced staff. You will have the opportunity to undertake advanced research training courses and specialist workshops in order to deepen your philosophical understanding of research and widen your practical skills and capabilities as a researcher. You will learn alongside other PhD and postgraduate students in an interdisciplinary context. You will join a research grouping and be able to participate in staff-student seminars and become part of the research culture of the university. You will have opportunities to experience and develop your skills in undergraduate

Your topic might involve the study of individual encounters, group behaviour, teaching and to build academic and professional networks.

institutional processes and community practices or broader questions of policy formulation at national and international level. You might have an interest in research related to public services, for instance in terms of advancing the understanding of the experiences and perspectives of service

The university's pioneering research, driven by more than 700 research students and supported by 500 staff, is internationally renowned and addresses some of the most critical issues affecting our world.

users, the development of professional roles or analysis and evaluation of the monstrating the signi cance of this work, three key pieces of research are listed among the UK's top 100 projects that will have a profound impact on the future.
